

Krishna Subedi

Full-stack engineer — multi-tenant marketplaces & backends with Spring Boot, React, Node.js

Kathmandu, Nepal · krishnasubedi219@gmail.com · github.com/Luke23-45 · linkedin.com/in/krishna-subedi

EXPERIENCE

Neryva

Jul 2025 – Present

Member of Technical Staff · Remote

- Built multi-tenant backend services for the AI agent platform — row-level security and cryptographic isolation preventing cross-tenant leakage in RAG pipelines, REST APIs and WhatsApp/Slack webhooks, asynchronous event backbone (brokers, task queues so agent loops never block HTTP), and real-time streaming over SSE/WebSockets; production deployment.
- Designed the drag-and-drop agent canvas where users assemble customized agents from memory, instruction, and dashboard components, plus guardrails and automated evaluation pipelines for production agent behavior across backend, frontend, and deployment. Demo: neryva.com.

Smaitic Labs

Apr 2024 – Jul 2025

Full-stack Developer · Kathmandu, Nepal

- Built a three-tier admin hierarchy (main/state/seller) with role-specific access and per-tier dashboards, plus a multi-tenant Spring Boot backend (hierarchical RBAC, ZipCode-based delivery logistics) that absorbs new regions and sellers without structural change and runs an automated commission engine that eliminates manual per-order fee calculation.
- Shipped [Vanidya](#) marketplace apps: native Android (Kotlin), offline-first PWA, real-time order tracking.

Nepal Oil Corporation Limited

Oct 2023 – Mar 2024

Software Engineer · Kathmandu, Nepal

- Designed a time-series fuel-demand forecasting system for regional fuel demand (diesel, petrol, aviation), modeling festival surges, strikes, and protests so inventory allocation tracked real consumption spikes, supply stayed smooth, and swings never reached the pump.
- Built an automated dispatch reporting system for national fuel logistics, consolidating daily depot and tanker movements into live per-depot dashboards that replaced manual end-of-day report preparation.

PROJECTS

Krishi Vaidya: AI-Powered Crop Disease Diagnosis

Apr – Jul 2026

Personal Project · Full-Stack

- Built an end-to-end crop disease diagnosis platform: an Expo Router mobile app with on-device TFLite/OpenCV inference and an Express API (JWT/refresh) on MongoDB.
- Trained a YOLO-family disease detector and a Qwen2.5-VL-3B LoRA fine-tune for diagnosis, wired into the backend through a VLM inference client and a Gemma-backed advisory parser; shipped native iOS/Android builds via EAS and hardened the API (rate limiting, validation, Helmet, Swagger, Jest, PM2).

Ecommerce Platform: Multi-Seller Marketplace

Apr – Jun 2025

Personal Project · Full-Stack

- Built a multi-seller marketplace backend in Express 5 and MongoDB with five-role RBAC (customer, individual seller, vendor staff, vendor admin, superadmin) and vendor-scoped permission checks, plus multi-step checkout with Stripe, saved payment methods, shipping, tax, and discount rules, Handlebars OTP email, and Cloudinary uploads.
- Shipped a React 19 storefront and role-specific dashboards (seller, vendor, superadmin) with Redux Toolkit, React Query, and Chart.js, plus Docker compose setup, controllers/services/repositories DI, and Winston audit logging.

EDUCATION

Bachelor of Engineering in Mechanical Engineering

2019 – 2023

Tribhuvan University · Kathmandu, Nepal · Licensed PE

SKILLS

Languages: Python, TypeScript, Java, Kotlin, SQL, JavaScript · **AI/Data:** LLMs/Generative AI, RAG, LLM Evaluation, FastAPI, Multi-Tenancy, Time-Series · **Web:** Spring Boot, Node.js (Express), Django, React, Redux · **Data/DevOps:** PostgreSQL, MySQL, MongoDB, Redis, Docker, Kubernetes, Jenkins, AWS · **Eng:** Git, CI/CD, Linux, Jest, Microservices, REST, JWT, RBAC, PWA
